

► TWF - safety systems

■ Shoring ladder

The shoring ladder is used with all **standard shoring systems**, allowing safe access up to a **depth of ten metres**.

Our standard model is three metres long and can be extended to up to ten metres using one-metre extension pieces.

It is not only a useful tool for making access to trenches and pits easier, it is also mandatory pursuant to German **Social Accident Insurance (DGUV)** regulations for trench depths of five metres or more.

- Easy to put in place by excavator
- Includes lower platform
- 1-metre extension pieces
- Expert-tested according to DIN EN ISO 14122-4, DIN 18799-1 and DIN EN 131-2 standards
- Approved for depths of up to 10 m
- Mandatory pursuant to DGUV regulations
- Variable from 3 - 10 m
